# MAXIPLANT®

## COMPOSITION

Calcium oxide (CaO)... 44%  
Magnesium oxide (MgO) 8%

RAW MATERIALS: Calcium and magnesium carbonate of natural origin.

## FORMULATION TYPE

wattable powder

## HAZARD IDENTIFICATION

-

## PACKAGING

1 or 5 Kg bags

**CHARACTERISTICS:** MAXIPLANT is a highly absorbable calcium and magnesium compound. It contains a high percentage of natural growth factors which give the product a high stimulatory activity able to increase the vegetative state and productivity of all plants.

MAXIPLANT stimulates the photosynthetic activity of plants with subsequent benefits on the biochemical processes of plants. MAXIPLANT is a mineral bioactivator, totally natural and completely absorbable by plants. The product, consisting of nanoparticles, enters directly inside the stomata openings, where it promptly releases nutrients. Inside the leaves MAXIPLANT dissociates into carbon dioxide (CO<sub>2</sub>) and calcium:

- improved vegetative growth
- increased production
- greater resilience to water, parasite and environmental stress
- better preservation of fruits

**DOSAGE:** MAXIPLANT is to be used at 2-3 grams per liter in foliar treatments and 3-5 kg/ha in fertigation.

**MISCIBILITY:** MAXIPLANT can be mixed with fertilizers, fungicides, insecticides, miticides and herbicides, whose effect it increases. Do not mix with polysulfides, and other products with strongly alkaline reactions.

**WARNING:** Use at cool temperatures (preferably in the morning, when the plant's stomata open up), watering the vegetation evenly.
