MAZI®

COMPOSITION

Manganese (Mn)... 30%
Zinc (Zn) 15%

RAW MATERIALS: Manganese
and Zinc Oxide.

FORMULATION TYPE

Powder

HAZARD IDENTIFICATION

PACKAGING

1 or 5 Kg bags

CHARACTERISTICS: MAZI is a fertilizer composed of a mixture of super micronized microelement particles with an average diameter of 0.6 microns. These superfine particles are much more effective than other products present in the market.

The product has been specifically designed to prevent and treat damage caused by microdeficiencies of zinc and manganese on all crops.

DOSAGE: MAZI is used at the dose of 1,5 - 2 kg/ha.

COMPATIBILITY: MAZI can be mixed with all commonly used products except oils.

WARNING: It is advisable to intervene in the coolest hours of the day, preferably towards the evening, wetting the vegetation well and uniformly. The addition of a wetting agent is recommended.
