ZIRMANG®

COMPOSITION

Manganese (Mn)... 10%
Zinc (Zn) 45%

RAW MATERIALS: Manganese
and Zinc Oxide, Zinc sulphate.

FORMULATION TYPE

Powder

HAZARD IDENTIFICATION

PACKAGING

1 or 5 Kg bags

CHARACTERISTICS: ZIRMANG is a fertilizer composed of a mixture of super micronized microelement particles with an average diameter of 0.6 microns. These superfine particles are much more effective than other products present in the market.

The product has been specifically designed to prevent and treat damage caused by microdeficiencies of zinc and manganese on all crops.

DOSAGE: ZIRMANG is used at the dose of 1,5 - 3 kg/ha.

COMPATIBILITY: ZIRMANG can be mixed with all commonly used products except oils.

WARNING: It is advisable to intervene in the coolest hours of the day, preferably towards the evening, wetting the vegetation well and uniformly. The addition of a wetting agent is recommended.
